

# GHA Proof of Delivery

If you're looking for a simple and effective POD solution for your Epicor deliveries, look no further. GHA has designed and developed one that integrates directly using the REST API's. It will be available for Epicor versions 10.2.400 onwards, for a sneak preview, simply download the app from the Google Play store for Android devices.

We have also committed to having POD available in the Apple app store. This will be coming soon.

## How does it work?

Once the delivery driver scans the delivery note, the app will record the date and time

of the delivery, location, name and signature (if safe to do so) of the recipient, and allow photos to be taken if required. This information will then be stored against the Pack ID and a flag will be set to show the delivery is complete.

If no one is available to take delivery, the courier has the opportunity to either cancel the delivery or leave it. If they choose to leave it, they will be required to take a photo and enter a location description as proof of delivery.

The Demo App is now available in the Google Play store, simply search for **GHAPOD** or follow this link:
