

GHA Proof of Delivery

If your business needs a simple and effective POD solution for your deliveries, look no further. GHA's POD solution has been designed and developed to take advantage and integrate directly using Rest API's. For Epicor customers it is available for Epicor versions 10.2.300 onwards, however its innovative design allows it to work with any system that has Rest API connectivity. The App is available now on the Google Play store for Android devices.

If you have Apple devices, GHA has also committed to having POD available in the Apple app store. This will be coming soon.

How does it work?

Once the delivery driver scans the delivery note, the app will record the date and time of

the delivery, location, name, and signature (if safe to do so) of the recipient, photos can also be taken if required.

This information is stored against the Pack ID and a flag will be set to show the delivery is complete.

If no one is available to take delivery, the courier can either cancel the delivery or leave it. If they chose to leave it, they will be required to take a photo and enter a location description as proof of delivery.

The App comes with a demo mode to allow you to experience the functionality, search the Google Play store for **GHAPOD** and or follow this link:
