

# GHA Proof of Delivery

**Does your business need a simple and effective POD solution for your deliveries, look no further. GHA's POD solution has been designed and developed to take advantage and integrate directly with a wide range of ERP systems via their Rest API's.**

For Epicor customers it is already available for Epicor versions 10.2.300 onwards, its innovative design using Epicors Rest API connectivity ensure fast and responsive information exchange between the device and the ERP system. The App is available now on the Google Play and Apple App store.

## **How does it work?**

Once the delivery driver scans the delivery note, the app will record the date and time of the delivery, location, name, and signature (if safe to do so) of the recipient, photos can also

be taken if required. This information is stored against the Pack ID and a flag will be set to show the delivery is complete.

If no one is available to take delivery, the courier can either cancel the delivery or decide to leave it in an acceptable location. If they choose to leave it, they will be required to take a photo and enter a location description as proof of delivery.

## **Driver Tracking**

The driver has the capability to build a manifest for the delivery, by scanning the delivery note when loading the vehicle, this will enable the sales team to see which sales orders are on a vehicle, also ones that have already been delivered and the current driver location.

The App comes with a demo mode allowing you to experience the functionality before deployment.
